## Employment Rates for OSUIT Summer 2018-Spring 2019

### Executive Summary

For OSU Institute of Technology, employment data continues to be difficult to obtain. Every term, an attempt is made to gather employment data from the graduating students on the Graduation Survey which is collected online with the help of the academic schools. While some students complete the Graduation Survey, some choose to fill in minimal information, and some choose not to submit the survey. Additionally, graduates are sent several emails requesting participation in the annual Alumni Survey and to complete the Employment Update form available on the OSUIT Institutional Research webpage. The Alumni Survey is sent to graduates 8 to 16 months post-graduation and participation is optional. The Alumni Survey employment data as well as the Employment Update data are incorporated into this report. In an effort to collect more data, Institutional Research employees check the LinkedIn website for employment data on those who did not submit data.

Since there continues to be a lack of usable data, the academic schools are asked to provide employment information on their graduates. Many faculty and staff members of the academic schools have kept in touch with their graduates, so this information is readily available. If the school does not have this information, they are asked to contact the graduate for the information. The data tables following this summary are based on data collected from the schools, Graduation Surveys, the follow-up Alumni Survey, and LinkedIn. If updated employment information was not provided by the Alumni Survey, online Employment Update or schools, the completed Graduation Survey was then used. This employment information is strictly based on employment and no other factors such as continuing education or military service.

There were 673 degrees awarded for summer 2018, fall 2018 and spring 2019 to 662 graduates. Of those 662 graduates, 384 (58%) submitted employment information. Of the 384 graduates who submitted information, 324 (84%) were employed full-time. Of the same 384 graduates, 305 (79%) were employed full-time in their major field. Just for informational purposes, of the 662 graduates, 98 (15%) reported continuing their education and 47 (7%) were seeking employment at the time of data collection.

If we look at the technical schools only, we find that there were 563 degrees awarded to 558 graduates. Sixty-four percent (357) of these graduates provided employment information. Of these 357 graduates, 86% (307) were employed full-time. Of the same 357 graduates, 83% (295) were employed full-time in field.

Another way to look at our graduates is to focus on the AAS and BT completers only. There were 558 AAS or BT degrees awarded during this time period to 557 graduates. Of the 557 graduates, 355 (64%) submitted employment information. While 86% (305) of the 355 graduates were employed full-time, 83% (293) were employed full-time in their major field.

The average salary for the full-time in major field graduates, as in the previous year, continued in the range of \$45,000-\$49,999 regardless of breakdown. Pay for graduates employed full-time in field started in the range of \$15,000-\$19,999 and the highest pay range was reported as \$100,000 and above.

Given the results of the various ways to breakdown our available employment data, we can definitely say that of our AAS or BT graduates who supplied employment information, 86% reported themselves as employed full-time and 83% reported as employed full-time in their major field area.
